After 52 years of occupation it is time for a two-state solution

Percentage of settlers out of the total West Bank population

- 13% Palestinians
- 87% Settlers

Percentage of settlers out of the total Israeli population

- 4.7% Settlers
- 95.3% Israelis

With the two-state solution, 75% of the settlers will remain in their homes as part of land swaps

The potential border according to the Geneva Initiative

- Future Palestinian State
- Lands annexed to Israel
- Lands annexed to Palestine

Ariel

Located 20 kilometers inside the West Bank, halfway between the Green Line and the Jordan River. Israeli annexation of Ariel would obstruct the establishment of a viable, contiguous Palestinian state.

E1 plan

Planned for a site east of Jerusalem, adjacent to the settlement of Ma’ale Adummim. If the proposed 3,682 housing units are built they would effectively bisect the West Bank, preventing the establishment of a contiguous, viable Palestinian State. If built, E1 would isolate East Jerusalem from the West Bank, preventing the development of a Palestinian political and economic capital in East Jerusalem.

Efrat and E2 plan

Efrat is located south of Bethlehem and east of the only major north-south highway in the southern West Bank (Rt.60). Both Efrat’s location and the location of the Separation Barrier north and east of Bethlehem, prevent growth for the town of Bethlehem. Moreover, E2, a plan for 2,500 housing units to further expand the containment of Bethlehem is being promoted. In addition, annexation of Efrat will also include the annexation of the road that links the Greater Jerusalem area with Bethlehem (Rt.68), thus further fragmenting the West Bank.

Jerusalem before 1967:

- Jerusalem annexed to the city: 70 sq. kilometres
- 70 thousand Palestinians received resident status

Jerusalem under Jordan:

- Approx. 6,000 Acres
- Approx. 9,000 Palestinians

Jerusalem under Israel:

- Approx. 38,000 Acres
- Approx. 150,000 Jews

A third of the lands that were annexed to Jerusalem (approx. 21 sq. kl) were expropriated by the Israeli government for the establishment of 12 Israeli neighborhoods. These neighborhoods were meant to isolate East Jerusalem from the West Bank and prevent it from becoming a future Palestinian capital. Today, approx. 215,067 Israelis live in these neighborhoods. Around 340,000 Palestinians live in Palestinian neighborhoods in East Jerusalem.

PEACE NOW

The two-state solution is possible based on two capitals in Jerusalem: the Israeli neighborhoods being the Israeli capital, the Palestinian neighborhoods being the Palestinian capital, and a special arrangement for the Old City and the holy sites.

Jerusalem after 1967:

- A new municipal border was drawn for Jerusalem which annexed to the city 70 sq. kilometres from West Bank that included East Jerusalem and 38 Palestinian villages.

The situation in East Jerusalem since 1967:

- Despite the complicated reality in Jerusalem, the two-state solution is possible. The solution suggests two capitals in Jerusalem: the Jewish neighborhoods will remain part of the capital of Israel, and the Palestinian neighborhoods will become the Palestinian capital.

The solution for Jerusalem:

- Suggests two capitals in Jerusalem: the Jewish neighborhoods will remain part of the capital of Israel, and the Palestinian neighborhoods will become the Palestinian capital.
